FOR IMMEDIATE RELEASE

PR2019-2

### **RDL Wall-Mounted Bluetooth® Audio Dante® Interface Now Shipping**

**October 18, 2019** - RDL is pleased to announce the immediate availability of the new D SERIES-BTN44 Wall-Mounted Bi-Directional Line-Level and Bluetooth Audio Dante Interface. The D SERIES-BTN44 modules are Dante networked, wall-mounted audio interfaces that include bidirectional Bluetooth audio, unbalanced analog stereo or mono audio inputs and outputs, and a balanced or unbalanced line-level output. Stereo audio from a compatible Bluetooth-enabled device feeds two Dante network audio channels. Stereo audio connected to a front-panel Mini-Jack or L and R RCA jacks feeds two other Dante network audio channels. The bidirectional Bluetooth audio provides full duplex conference-call functionality to a paired phone or equivalent device.

The D SERIES-BTN44 modules are ideal for use in a wide variety of applications including corporate, hospitality, education, fitness facilities or anywhere a high quality Bluetooth audio interface is required. Three color options (white, black, stainless steel) are available to match nearly any decor.

The D SERIES-BTN44 modules are powered from PoE. The installer can customize the module name and programming password through the Bluetooth connection using a smartphone, computer or tablet terminal program. These modules feature studio-quality circuits and analog filters to provide audio performance exceeding expectations from consumer interface technologies. High performance, simplicity of operation and efficiency of installation make RDL the best value in professional Bluetooth interfaces.
